                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   homocysteine to methionine. The invention provides potential therapy individuals with MYHFR deficiency. The non allele-specific antisense nucleic acids are useful for treating, stabilising or preventing cancer particularly breast carcinoma, colon carcinoma, colorectal carcinoma, lung cancer, brain cancer, pancreatic cancer, kidney cell cancer, neuroblastoma, glioma and leukaemia. MYHFR cDNA probe is used in gene therapy. The present sequence is human methylenetetrahydrofolate reductase (MYHFR) protein cDNA #2. Human MTHFR gene is mapped to

It may be used for the construction of DNA probes which may be used for the identification of sequence abnormalities in patients with severe or mild MTHFR deficiency. The resulting probe may also be used in gene therapy to produce the MTHFR protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human methylene:tetra:hydro:folate reductase cDNA probe - for detection of sequence abnormalities in methylene:tetra:hydro:folate reductase e.g. in cardiovascular, neurological or folic acid metabolism disorders

The present sequence is that of cDNA coding for human CC methylenetetrahydrofolate reduction of 5,10-methylenetetrahydrofolate catalysing the NADPH-linked reduction of 5,10-methylentrahydrofolate CC to 5-methyletrahydrofolate, a co-substrate for methylation of CC homocysteine to methionine. To identify human MMHFR cDNA, PCR primers based on the porcine sequence were used to screen a human CC liver lambda-gt10 cDNA library by PCR. A 1266 bp fragment was obtained, and this was used to screen a human colon carcinoma cDNA CC library to obtain the 2.2 kb clone. The MMHFR gene (see AAA50634) CC maps to chromosome 1p36.6. A cDNA probe for human MMHFR, which hybridises to the present sequence, is claimed. This probe can be CC used to identify MMHFR sequence abnormalities in individuals with severe or mild MMHFR deficiency. These abnormalities may comprise CC a mutation selected from 167c to A, 482G to A, 550c to T, 677C to T, 692C to T, 764C to T, 792+1G to A, 985C to T, 1015C to T, 1081C CC to T, 1298A to C and 131T to C. MMHFR peficiency may be associated CC with a cardiovascular disorder, cancer (especially neuroblastoma or Cc colorectal carcinoma), osteoporosis, neural tube defect in an offspring of a patient, neurological disorders, and other disorders for CC treating MMHFR peficiency by gene therapy or by administration of CC expression or MMHFR protein activity, or by administering an agent that modifies MMHFR gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 293;

The invention relates to a non allele-specific antisense nucleic acids, which binds to methylenetetrahydrofolate reductase (MTHFR; EC 1.5.1.20) nucleic acids and inhibits wTHFR protein expression in a mammal MTHFR catalyses the NADPH-linked reduction of 5.10-methylenetetrahydrofolate, a co-substrate for methylation of homocysteine to methionine. The invention provides potential therapy for individuals with MTHFR deficiency. The non allele-specific antisense nucleic acids are useful for treating, stabilising or preventing cancer, particularly breast carcinoma, colon-carcinoma, colorectal carcinoma, lung cancer, brain cancer, pancreatic cancer, kidney cell cancer, neuroblastoma, gloma and leukaemia. MTHFR cDNA probe is used in gene therapy. The present sequence is human methylenetetrahydrofolate reductase (MTHFR) protein cDNA #1. Human MTHFR gene is mapped to chromosome 1p36.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; methylenetetrahydrofolate reductase; MTHFR; gene therapy; glioma; antisense therapy; EC 1.5.1.20; chromosome 1p36.3; cancer; kidney cell; pancreas; lung; brain; cytostatic; colon carcinoma; breast; colorectal; neuroblastoma; leukaemia; ss.
                                                                                                                                                                                                                                                                                                       New antisense nucleic acids, which are methylenetetrahydrofolate reductase inhibitors, useful for treating, stabilizing or preventing cancer, e.g. breast carcinoma, colon carcinoma, colorectal carcinoma neuroblastoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAD20462 standard; cDNA; 2220

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC rhe invention describes a method of diagnosing a psychosis in a subject, CC or a risk for or propensity to psychosis in a subject comprising CC determining the presence of a heterozygous methylenetetrahydrofolate CC reductase (MTHFR) mutant allele in a nucleic acid sample obtained from a CC subject. The method is useful for diagnosing subjects at risk of, or CC suffering from a psychosis, particularly schizophrenia but includes CC manic-depressive disease, organic psychosic disorders, psychosis in CC alcohol or drug intoxication, postinfection psychosis, postpartum CC psychosis, senile psychosis, traumatic psychosis and acute idiopathic CC psychotic illnesses. A new pharmaceutical composition is used for CC treating amyotrophic lateral sclerosis, anxiety, dementia, depression, CC epilepsy, Huntington's disease, migraine, demyelinating disease, multiple CC sclerosis, pain, Parkinson's disease, schizophrenia, psychoses, or CC stroke. Deficiency may be associated with diseases including CC cardiovascular disorders, cancer (e.g. neuroblastoma and colorectal CC cardiovascular disorders, inflammation, immune disorders, neoplastic disease and CC renal disease. This sequence encodes human methylenetetrahydrofolate CC described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1160
The invention describes a method of diagnosing a psychosis in a subject, or a risk for or propensity to psychosis in a subject comprising determining the presence of a heterozygous methylenetetrahydrofolate reductase (MTHFR) mutant allele in a nucleic acid sample obtained from a subject. The method is useful for diagnosing subjects at risk of, or suffering from a psychosis, particularly schizophrenia but includes manic-depressive disease, organic psychotic disorders, psychosis in alcohol or drug intoxication, postinfection psychosis, postpartum
                                                                                                                                                                                                 Diagnosing subjects at risk for or suffering from a psychosis, particularly schizophrenia comprises determining the presence of heterozygous methylenetetrahydrofolate reductase mutant allele in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             psychosis, senile psychosis, traumatic psychosis and acute idiopathic psychotic illnesses. A new pharmaceutical composition is used for treating amyotrophic lateral sclerosis, anxiety, dementia, depression, epilepsy, Huntington's disease, migraine, demyelinating disease, multi sclerosis, pain, parkinson's disease, schizophrenia, psychoses, or stroke. Deficiency may be associated with diseases including cardiovascular disorders, cancer (e.g. neuroblastoma and colorectal carcinoma), osteoporosis, metabolic or endocrine disease, inborn error of metabolism, inflammation, immune disorders, neoplastic disease and renal disease. This sequence encodes a mutant human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       methylenetetrahydrofolate reductase (MTHFR, EC number nucleotide 167 has been altered to produce a mutant the method of the invention.

Note: This sequence does not appear in the specification of the wild type sequence (ABK13501) using created from the wild type sequence (ABK13501)

The invention describes a method of diagnosing a psychosis in a subject, CC or a risk for or propensity to psychosis in a subject comprising CC determining the presence of a heterozygous methylenetetrahydrofolate creductase (MTHFR) mutant allele in a nucleic acid sample obtained from a CC subject. The method is useful for diagnosing subjects at risk of, or CC suffering from a psychosis, particularly schizophrenia but includes CC manic depressive disease, organic psychotic disorders, psychosis in CC alcohol or drug intoxication, postinfection psychosis, postpartum cCC psychosis, senile psychosis, traumatic psychosis and acute idiopathic CC psychosis, senile psychosis, traumatic psychosis and acute idiopathic CC psychotic illnesses. A new pharmaceutical composition is used for CC creating amyotrophic lateral sclerosis, anxiety, dementia, depression, cc psychosis, pain, parkinson's disease, schizophrenia, psychoses, or CC stroke. Deficiency may be associated with diseases including CC cardiovascular disorders, cancer (e.g. neuroblastoma and colorectal CC cardiovascular disorders, schoolate reductase (MTHFR, EC number 1.5.1.20), in which CC created from the wild type sequence (ABK13501) using information given the nethod of the invention.

Patent No. 6218120

GENERAL IMPOWADION:
APPLICANT: ROZEN RIMB

APPLICANT: ROZEN, Philippe
ITITLE OF INVENTION: CDNA FOR HUMAN METHYLENETETRAHYDROFOLATE
ITITLE OF INVENTION: REDUCTASE
ITITLE OF INVENTION: REDUCTASE
CURRENT APPLICATION UNMBER: US/09/258,928

CURRENT FILING DATE: 1999-03-01
PRIOR APPLICATION NUMBER: 089738,000
PRIOR FILING DATE: 1997-02-12
PRIOR APPLICATION NUMBER: 089410620.0
PRIOR FILING DATE: 1994-05-26

PRIOR FILING DATE: 1994-05-26

NUMBER OF SEQ ID NOS: 14
SOFTWARE: FastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1, Application US/08752760A Patent No. 5877011
GENERAL INFORMATION:
APPLICANY: BENNETT, Alan
APPLICANY: BENNETT, Alan
APPLICANT: LABAVITCH, John M.
APPLICANT: STOTZ, Henrik
TITLE OF INVENTION: PLANT INHIBITORS OF FUNGAL
TITLE OF INVENTION: POLYGALACTURONASES AND THEIR USE TO CONTROL FUNGAL NUMBER OF SEQUENCES: 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            INFORMATION FOR SEQ ID NO:

Sequence 3, Application US/09728910
Patent No. US20010025030A1
GENERAL INFORMATION:
APPLICANT: Sekhon, Jaspreet
APPLICANT: Sekhon, Jaspreet
TITLE OF INVENTION: CDNA FOR HUMAN METHYLENETETRAHYDROFOLATE
TITLE OF INVENTION: REDUCTASE AND USES THEREOF
FILE REFERENCE: 04844/006001
CURRENT FILING DATE: 2000-12-01
CURRENT FILING DATE: 2000-12-01
RATIOR APPLICATION NUMBER: US 09/258,928
PRIOR APPLICATION NUMBER: US 09/258,928
PRIOR FILING DATE: 1999-03-01
NUMBER OF SEQ ID NOS: 15
SOFTWARE: FastSEQ for Windows Version 4.0
USEQ ID NO 3
SEQ ID NO 3
LENGTH: 2219
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
                                                 Д
                                                                                                                                        Дb
                                                                                                                                                                               Q
                                                                                                                                                                                                                           Дb
                                                                                                                                                                                                                                                                       Ωy
                                                                                                                                                                                                                                                                                                                   Дb

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note-"vector: pBluescript II SK+; Site_1: EcoRI; Site_2: xhol; The cDNA library was constructed from mRNA isolated from germinating shoots of 3 day old seedling for the cultivar Williams 82. The seedlings were germinated in a growth chamber using germination paper in a solution containing 100ppm auxin. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a xhoi restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DHIOB host cells (GibcoBRI). This library was constructed in the laboratory of Dr. Randy Shoemaker. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   est@watson.wustl.edu

                                                                                                                                                                                                                                  /note-"Vector: pBluescript II xR; Site_1: ECORI; Site_2: XhoI; This cDNA library was constructed from mRNA isolated from the apical shoots of 9 to 10 day old etholated seedlings. The shoot tips including any emerged leaves were harvested for mRNA isolation. The cDNA library was prepared using the Stratagene pBluescript II XR cDNA library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dr) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were constructed by Dr. Randy Shoemaker and Dr. John Proceedings.
                                                                                                                                                                                Erpelding."

At harvest, seeds were removed from pods and isolated pod walls were collected and ismediately frozen in liquid nitrogen. Pod walls were poolled for mRNA extraction. cDNA was prepared from polya+ enriched RNA. The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Exrassist helper phage and propogated in XLOLR cells."

The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI and XhoI, and phosporylated by Stratagene). Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=25). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V-A,C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGACTAGTCTGAGGT1887] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 466.4; DB 10;
